DETAILED ACTION

1. Claims 235-281 are pending in the instant application. Claims 1-18 have been canceled and claims 235-281 have been added as requested by Applicant in Paper Number 10, filed Nov. 27, 2001.

Election/Restrictions

2. The amendment filed on Nov. 27, 2001 canceling all claims drawn to the elected invention and presenting only claims drawn to a new invention is non-responsive (MPEP § 821.03). The remaining claims are not readable on the elected invention because they are drawn to methods of using the DNA encoding SNORF72 to screen for compounds that bind to it, or to antagonists of SNORF72, or to a process of synthesizing a SNORF72 antagonist.

Since the above-mentioned amendment appears to be a *bona fide* attempt to reply, applicant is given a TIME PERIOD of ONE (1) MONTH or THIRTY (30) DAYS, whichever is longer, from the mailing date of this notice within which to supply the omission or correction in order to avoid abandonment. EXTENSIONS OF THIS TIME PERIOD UNDER 37 CFR 1.136(a) ARE AVAILABLE.

3. Therefore, restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 235-251, 254-263, 266-271 and 276-281, drawn to methods of identifying compounds that bind to or are antagonists of mammalian SNORF72 receptor, classified in class 435, subclasses 7.1 and 7.2, for example.
- II. Claims 252, 253, 264, 265 and 272, drawn to antagonists of mammalian SNORF72 receptor, class and subclass undeterminable.

Art Unit: 1646

- III. Claims 273-275, drawn to a process of making a composition of matter by synthesizing a compound that binds to or is an antagonist of mammalian SNORF72 receptor, class and subclass undeterminable.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions I and II are related as process of identifying and product identified. In the instant case the process for identifying compounds that bind to or are antagonists of mammalian SNORF72 receptor that is invention I can identify the antagonist of invention II, but the method can also identify a different antagonist.
2. Inventions III and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the antagonist of invention II can be synthesized by the method of invention III, but the antagonist may also be isolated from natural sources, which is a materially different method.
3. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions require different method steps and have different goals.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification or recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1646

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
